FREIGHT RATES.

The following freight rates have been compiled from the most reliable sources of information for the convenience of our customers. Rates being subject to constant fluctuation, we cannot guarantee those here given. They will, however, be found approximately correct, both for present and future reference.

Classifications of freights not being the same in all parts of the country, renders it difficult to obtain rates to some points on certain articles, and the different regulations existing as to weights of earloads, makes any information we might attempt to give as to earload rates to certain points so uncertain, we have not thought best to insert them. We shall always take pleasure in furnishing all obtainable information, concerning rates to any point upon application.
